EDUCATION

University of Illinois, Urbana-Champaign (UIUC) Aug 2024 – Dec 2027
Bachelor of Science in Computer Engineering

- Relevant Coursework: Computer Systems and Programming, Introduction to Computing, Introduction to Electronics, Discrete Structures, Linear Algebra with Computational Applications

PROFESSIONAL EXPERIENCE

Striim Inc. Palo Alto, CA
Software Engineering Intern Jul 2023 – Aug 2023

- Developed and validated Java-driven migration solutions that streamlined legacy code transitions and enhanced overall system efficiency by 20%, validating functionality through integration testing.
- Gained hands-on experience with PostgreSQL and MySQL, establishing databases for large-scale data streaming.
- Utilized AWS services to deploy and manage cloud-based data pipelines, enabling scalable and reliable data processing across distributed systems.

PROJECTS

AssignmentSync

- Implemented OAuth 2.0 for Google Classroom with secure token storage and support for additional platforms.
- Designed PostgreSQL schema with Prisma ORM for assignments and authentication tokens, including relational models, migrations, and query optimization with indexing.
- Built a full-stack homework aggregation platform using Next.js, TypeScript, React, and PostgreSQL, integrating data from multiple educational platforms into a singular calendar interface through APIs and ICS file parsing.

Anagram Dictionary System

- Designed an anagram dictionary system that groups words by sorted character signature using a binary tree.
- Constructed a templated binary search tree in C++ with insertion, deletion, lookup, and traversal operations.
- Developed file I/O pipelines to read dictionary files and save ordered anagram groupings into output files.

Vending Machine Controller

- Engineered combinational logic in SystemVerilog to generate and dispense outputs based on coin input states.
- Minimized gate count using NAND/NOR/NOT gates, reducing area by 15% for future breadboard deployment.
- Implemented logic outputs on an FPGA/breadboard testbed to simulate real-time coin detection and dispensing.

LEADERSHIP & ACTVITIES

EV Concept Champaign, IL
Electrical Team Aug 2024 – Present

- Designed battery and power distribution subsystems across modules to spec, including PCB layout using KiCad.
- Assisted embedded team in interfacing rearview camera systems with the microcontrollers and display modules.
- Deployed sensor network for autonomous features with a 34% increase in situational awareness in bench trials.

Project Code Champaign, IL
Lead Developer Jan 2025 – Present

- Built RecipeGram, a full-stack social app for sharing recipes and connecting with food and health enthusiasts.
- Implemented database schemas and SQL queries to support user profiles, ensuring data integrity and scalability.
- Co-defined Node.js REST APIs with the frontend team to ship a smoother React UX from Figma mocks.

SKILLS

- **Languages:** Java, Python, C/C++, Verilog, JavaScript, HTML/CSS, Assembly, Swift, PostgreSQL, MySQL
- **Frameworks, Libraries & Tools:** React, Node.js, Next.js, Xcode, NumPy, Pandas, Git, Figma, Linux, AWS
