

# ROHAN KOHLI

Burlingame, CA | (650) 484-9316 | kohli10@illinois.edu | LinkedIn | GitHub | Portfolio

## EDUCATION

---

### University of Illinois, Urbana-Champaign (UIUC)

*Bachelor of Science in Computer Engineering*

**Champaign, IL**

*Expected May 2028*

- **Relevant Coursework:** Computer Systems and Programming, Data Structures and Algorithms, Discrete Structures, Linear Algebra with Computational Applications, Intro to Electronics, Intro to Computing

## PROFESSIONAL EXPERIENCE

---

### Cohesity

*Software Engineering Intern*

**Santa Clara, CA**

*Jun 2026 – Aug 2026*

- Built a **RAG** pipeline turning resolved **Jira** support tickets and linked **Confluence** docs into a searchable knowledge base.
- Applied an **LLM** to distill tickets and fix commits into root-cause summaries, embedded via **bge-m3** and indexed into a **hybrid vector database (Qdrant)** with quality-tiered ranking.
- Powered real-time **auto-diagnosis**: retrieves similar past issues/fixes to suggest a root cause before an engineer investigates.
- Turned scattered tribal support knowledge into an automated diagnostic agent, cutting time-to-resolution by **40%**.

### NOBE

*Project Manager*

**Champaign, IL**

*Jan 2026 – Present*

- Architected a **portfolio optimization algorithm** in Python identifying stock combinations meeting gain/cost-basis thresholds, using **pruning and heuristic search** to improve runtime by **~60%** over brute force.
- Engineered an **AI-powered trading engine** to simulate and execute strategies with real-time market data feeds and automated order logic.
- Developed and maintained a **database** in **Azure SQL** to store and query historical trade data, positions, and performance metrics across portfolios.

### Striim

*Software Engineering Intern*

**Palo Alto, CA**

*Jul 2023 – Aug 2023*

- Modernized legacy codebases with **Java**-driven migration tooling, improving system efficiency by **20%**.
- Designed and provisioned **PostgreSQL** and **MySQL** databases to support high-throughput data streaming pipelines at production scale.
- Deployed and managed **cloud-based data pipelines** on **AWS**, enabling scalable and fault-tolerant distributed data processing.

## PROJECTS

---

### Cruzi | *Swift, Node.js, JavaScript, Oracle Autonomous Database, OCI, Supabase Auth, Docker, Cloudflare, Stripe, Git*

- Built a student-only rideshare platform connecting verified students for affordable, campus-focused rides as riders or drivers.
- Engineered an end-to-end ride matching system coordinating rider requests, driver availability, location data, and real-time ride state transitions.
- Designed a scalable cloud backend supporting **1,000+ concurrent users** with secure APIs, automated testing, document storage, and cloud infrastructure.

### AssignmentSync | *TypeScript, React, Next.js, Node.js, Prisma, PostgreSQL (Supabase), OAuth*

- Implemented secure **OAuth 2.0** authentication for Google Classroom with automatic token refresh and a pluggable provider architecture for future LMS integrations.
- Optimized a **PostgreSQL** schema with **Prisma ORM**, normalized relational models, and index-tuned queries to keep the platform fast at scale.
- Delivered a **full-stack** sync engine that pulls assignments from multiple LMS platforms in real time via APIs and ICS parsing into one calendar.

### StudyBetter | *JavaScript, Next.js, Chrome Extension APIs, PostgreSQL (Supabase)*

- **Won 1st place at Pulse 2026 Hackathon**, shipping a real-time productivity tracker with actionable student insights in 24 hours.
- Developed a **burnout scoring algorithm** modeling study load, streak patterns, and break frequency to flag at-risk students early.
- Shipped **interactive dashboards** surfacing daily, weekly, and subject-level study trends to drive data-informed habit changes.

## SKILLS

---

**Languages:** Java, Python, C/C++, SystemVerilog, JavaScript, TypeScript, HTML/CSS, Assembly, Swift, PostgreSQL, MySQL  
**Frameworks, Libraries & Tools:** OCI, React, Node.js, Next.js, Docker, AWS, Azure SQL, CI/CD, NumPy, Git, Linux, Qdrant, LLM/RAG pipelines
